

REMOTE DISPENSE CONTROL SYSTEM

CSi's remote dispensing system provides accurate 'real time' information of the physical fluid dispensed from any one of your dispensing hoses.

Using the latest in telemetry software and specifically designed hardware, the physical dispense of any liquid can be checked anywhere in the world simply by accessing the DCSi secure login web site.

All dispenses can be linked to specific cost centres to create a better management and control of stock.

Our remote dispensing system can be used on any pump

DCSi's remote pump dispensing system provides complete peace of mind when dispensing liquids. On top of the obvious security benefits, it's also a powerful and practical way to manage and control usage of all liquids stored on farms, mines, construction sites, storage facilities and onsite depots.

Benefits

Provides complete control and management of stock

Stops unauthorised access to your fuel

Keeps an accurate account of the fuel dispensed to each vehicle

Identify discrepancies before losses occur

Can be used on any pump and any make on site
